

Output results of CLIME (CLustering by Inferred Models of Evolution)

Dataset:

Num of genes in input gene set: 3
Total number of genes: 20834
Prediction LLR threshold: 0

The CLIME PDF output two sections:

1) Overview of Evolutionarily Conserved Modules (ECMs)

- Top panel shows the predefined species tree.
- Bottom panel shows the partition of input genes into Evolutionary Conserved Modules (ECMs), ordered by ECM strength (shown at right), and separated by horizontal lines.
- Each row show one gene, where the phylogenetic profile indicates presence (blue) or absence (gray) of homologs in each species (column).
- Gene symbols are shown at left. Gray color indicates that the gene is a paralog to a higher scoring gene within the same ECM (based on BLASTP $E < 1e-3$).

2) Details of each ECM and its expansion ECM+

- Top panel shows the inferred evolutionary history on the predefined species tree. Branch color shows the gain event (blue) and loss events (red color, with brighter color indicating higher confidence in loss). Branches before the gain or after a loss are shown in gray.
- Bottom panel shows the input genes that are within the ECM (blue/white rows) as well as all genes in the expanded ECM+ (green/gray rows). The ECM+ includes genes likely to have arisen under the inferred model of evolution relative to a background model, and scored using a log likelihood ratio (LLR).
- PG indicates "paralog group" and are labeled alphabetically (i.e., A, B). The first gene within each paralog group is shown in black color. All other genes sharing sequence similarity (BLAST $E < 1e-3$) are assigned to the same PG label and displayed in gray.

Overview of Evolutionarily Conserved Modules (ECMs)

ECM 1, Gene set "platelet dense tubular network", Page 1

Num of ECM Genes: 1. Num of Predicted Genes: 55

1: acrosomal membrane || 2: external side of plasma membrane || 3: platelet alpha granule || 4: platelet dense tubular network || 5: platelet alpha granule lumen || 6: proteinaceous extracellular matrix || 7: extracellular matrix || 8: extrinsic to external side of plasma membrane || 9: neuromuscular junction || 10: melanosome || 11: fibrinogen complex || 12: endoplasmic reticulum lumen || 13: endoplasmic reticulum-Golgi intermediate compartment

ECM 1, Gene set "platelet dense tubular network", Page 2

Num of ECM Genes: 1. Num of Predicted Genes: 55

1: dendrite || 2: kainate selective glutamate receptor complex || 3: perikaryon || 4: postsynaptic membrane || 5: presynaptic membrane || 6: terminal button || 7: axon || 8: dendrite cytoplasm || 9: collagen || 10: endoplasmic reticulum lumen || 11: extracellular matrix || 12: proteinaceous extracellular matrix || 13: nuclear membrane || 14: P granule || 15: piP-body || 16: cytoplasmic mRNA processing body || 17: micro-ribonucleoprotein complex || 18: mRNA cap binding complex || 19: polysome || 20: ribonucleoprotein complex || 21: RNA-induced silencing complex || 22: chromatoid body || 23: external side of plasma membrane || 24: integrin complex || 25: integral to Golgi membrane || 26: sarcoplasmic reticulum || 27: T-tubule || 28: voltage-gated calcium channel complex || 29: M band || 30: basement membrane || 31: stereocilia ankle link complex || 32: stereocilium bundle || 33: stereocilium membrane

ECM 2, Gene set "platelet dense tubular network", Page 1

Num of ECM Genes: 1. Num of Predicted Genes: 4

PG	Protein	Prokaryotes	Protists	Plants	Fungi	Metazoa	LLR	Notes
A	ITPR1							1 / 2 / 3
A	ITPR2						49.4	3 / 4 / 5
A	ITPR3						35.9	3 / 6 / 7 / 8 / 9
B	MCOLN3						7.1	
B	MCOLN2						2.9	

1: platelet dense granule membrane || 2: platelet dense tubular network || 3: platelet dense tubular network membrane || 4: cell cortex || 5: sarcoplasmic reticulum membrane || 6: apical part of cell || 7: brush border || 8: myelin sheath || 9: nuclear outer membrane

ECM 3, Gene set "platelet dense tubular network", Page 1

Num of ECM Genes: 1. Num of Predicted Genes: 0

1: caveola || 2: neuromuscular junction || 3: platelet dense tubular network || 4: postsynaptic membrane
